

ACCESS ARRAY ELEMENTS USING **ARRAY.AT**

Currently not supported in Internet Explorer

Array.at is a new array method that provides a better way to access elements at the end of the array.

```
const array = ['xbox', 'playstation', 'nintendo'];  
  
array[0]; // 'xbox'  
  
array[1]; // 'playstation'  
  
array[array.length - 1]; // 'nintendo'  
  
array[array.length - 2]; // 'playstation'
```

❌ Don't do this

```
const array = ['xbox', 'playstation', 'nintendo'];  
  
array.at(0); // 'xbox'  
  
array.at(1); // 'playstation'  
  
array.at(-1); // 'nintendo'  
  
array.at(-2); // 'playstation'
```

✅ Do this
